DETAILED ACTION

1. Claims 1-20 are presented for examination.
2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The current title is imprecise.

Claim Rejections - 35 U.S.C. § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the internet" in line 2. There is insufficient antecedent basis for the limitation in the claim.

Claim 2 is rejected because they incorporate the deficiencies of claim 1.

Claim Rejections - 35 U.S.C. § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -
(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Anderson et al. (Anderson), US patent no. 5,961,604.

As to claims 1 and 2, Anderson discloses an uninterruptible power supply manager [38, fig. 2, fig. 3] for managing a number of uninterruptible power supply systems [28, figures 2, 3] coupled to an internet [col. 1, lines 19-29, 42], the uninterruptible power supply manager comprising:

a communication port for communicating over the internet with the uninterruptible power supply systems and a plurality of user computers [col. 3, lines 5-32; col. 6, lines 65-67];

wherein the uninterruptible power supply manager computer is constructed and arranged to obtain inventory and status information from each uninterruptible power supply system over the internet and to provide at least a subset of the inventory and status information to at least one of the user computers over the internet [col. 4, lines 21-42; col. 6, lines 65-67].

Anderson further discloses a computer as the uninterruptible power supply manager. Inherently, the computer includes a processor and a storage medium for storing a database [col. 2, lines 59-61; col. 4, lines 33-35].

As to claims 3-4 and 10-11, Anderson teaches the claimed system. Therefore, Anderson teaches the claimed method of steps to carry out the system.

As the limitations set forth claims 5-9 are directed to implementations for implementing the method of steps of the uninterruptible power supply manager of claim 3. As discussed above, Anderson teaches of implementing the method of steps of the uninterruptible power supply manager of claim 3. It is for this reason, at the time of the invention, one of ordinary skill in the art would have readily recognized that Anderson

may obviously also teach the implementations the method of steps of the uninterruptible power supply manager of claim 3 as set forth in claims 5-9. Therefore, claims 5-9 are rejected under the same rationale with respect to claim 3 [col. 3, line 47-col. 4, line 9].

As claims 12-20, Anderson teaches the claimed method of steps of claims 3-11. Therefore, Anderson teaches the claimed system of 12-20 respectively to carry out the method of steps.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ewing et al., US patent no. 5,949,974, discloses a power manager with a SNMP agent for storing a database, wherein the power manager manages a plurality of power module based on the database [fig. 1, 3; col. 4, lines 37-50; col. 5, lines 38-50; col. 7, lines 12-19].
